Election/Restrictions

This application contains claims directed to the following patentably distinct species:

Species 1 is drawn to a method for encoding an audio signal by determining a temporal masking index as in figure 1, pg.4 [0014], pg.6 [0026], claims 1-12.

Species 2 is drawn to a method for encoding an audio signal by determining an inharmonicity index as in figure 7, pg.4 [0020], pg.15 [0053], claims 13-22.

The species are independent or distinct because they provide different indexing methods that are not reliant on each other.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 23-24, 27-28, and 31-33 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).
